CLASSIFIEDS MARKET

Market Focus: Classifieds

Focus Segment

Other Segment Reports

SMALLEST MARKET IN GLOBAL DIGITAL ADVERTISING - STRONG MARKET IN EUROPE

Customer benefit

Classifieds are **small ads grouped under a specific heading** (classification) such as automobiles or real estate.

Online classifieds usually appear in specific portals, which can be differentiated in **horizontals and verticals**.

While horizontal business models have a generalist approach and cover most topics, vertical pure player only have specific classifieds like employment listings, real estate listings or automotive listings.

We can observe that many markets are **dominated either by one generalist service** (e.g. FINN.no in Norway) **or by vertical specialist platforms** (e.g. mobile or stepstone in Germany).

Also, some kinds of product listings on e-commerce platforms are kind of classifieds. These play an extraordinary role in the Chinese market.

Besides relatively low prices, classifieds have the advantage to reach very **specific target groups without excessive scattering losses** which we can observe in the field of Banner Advertising for instance.

In contrast to other Digital Advertising formats, Classifieds have a **pull characteristic**. The audience is usually looking for the product the classified is advertising.

The common pricing model is a **one-time fee per listing**. The fee has to be paid by the advertiser, regardless of the outcome of the ad, depending on factors such as the ad's position, size or display duration.

We consider B2B or B2C, but **no C2C classifieds**. Revenue from flea market or second-hand trade platforms and apps like Shpock or letgo, for instance, are not considered within this report.

Market size

The **global Online Classifieds market size is US\$16.5 billion in 2016** and has a share of 8.3% of the Digital Advertising market.

With this share Online Classifieds is the smallest market in Digital Advertising.

The **United States**, **Europe** and **China** cover 80.0% of the global Online Classifieds market with an accumulated revenue of **US\$13.7 billion**.

Europe is the biggest market with a revenue of **US\$6.1 billion in 2016**. With this market volume it is nearly twice the size of the **US** market with a market size of **US\$3.3 billion** or the **Chinese** market with **US\$3.7 billion**.

In contrast to many other digital markets, the **US** market is surprisingly **the smallest one**, despite the pioneering role in digital markets the **US** usually has.

Classifieds have a share of 4.1% of the total market in the **US**.

A closer look at the **US** market leads to the conclusion that this pioneering role might be the reason for the **low share of Online Classifieds**.

Innovative advertising formats like Social Media Advertising are dominating the market with a share of 18.5% and replacing the somehow old-fashioned classifieds format.

In **Europe**, however, the share of Online Classifieds is 14.5%, while Social Media Advertising accounts for 11.8%.

In some **European** countries with nearly monopolistic and horizontally aligned players **Online Classifieds play the most important role** in the market.

In Norway, for instance, Online Classifieds is the largest segment with a **share of 31.5%**.

FAST AND STRONG GROWTH IN CHINA – MOBILE ONLY USE CASES ARE RARE

Future developments

The global Online Classifieds market is growing with **an average annual growth rate of 9.2% to 2021** to reach a total market size of **US\$25.6 billion**.

We expect a moderate growth in the **US** and in **Europe**. While Online Classifieds in the **US** are growing with **an annual growth rate of 6.6% to 2021**, the **European** market is growing with a **CAGR of 3.4%** in the same timeframe.

Nevertheless, the slightly higher growth in the **US** does **not lead to more importance** of Online Classifieds in the total Digital Advertising market.

The **share decreases strongly** and Classifieds only account for 3.9% of the **US** Digital Advertising market in 2021 compared to 8.5% in 2016.

Despite the relatively small growth rate in **Europe** the status of Online Classifieds **stays high**, particularly compared to the share in **US** market described above.

They will account for 12.0% of the **European** market in 2021.

The relevance gets clear, when we compare the share on the global market in 2021, which is 7.7%.

The **Chinese** market, however, is growing rapidly with **an annual growth rate of 22.2% to 2021**.

Reasons for this outstanding fast growth can be found in a generally **fast growing Digital Advertising Market** in **China** (17.6% CAGR 2016 to 2021) and a **high relevance of paid product listing** within the e-Commerce platforms. Thus, the growing e-Commerce market in **China**, with a CAGR of 17.5% to 2021 reaching a total market volume of US\$756 billion is driving the Classifieds market.

The mobile share is growing fast over all regions with average annual growth rates between 26.2% and 29.0% to 2021.

Nevertheless, the size of mobile revenue stays small, due to its very small basis in 2016.

Assumptions and sensitivity

Differences regarding formats, pricing models, reach and audiences between Online Classifieds and other Digital Advertising formats make it **hard to compare** these markets without any further explanation.

Prices are often relatively low and not tangible with the typical pricing models like cost-per-click (CPC) or cost-per-mille (CPM).

The typical pricing for Online Classifieds is a specific **one-time fee** independent from the outcome.

Therefore, we have **low average revenue per Internet user**, especially compared to success-based advertising models like Search Advertising.

Furthermore, the **general shift towards mobile advertising**, which can be seen in all other segments of Digital Advertising, does not affect Online Classifieds in the same way.

Upcoming C2C flea market apps

indicate initial approaches of mobile only Online Classifieds.

C2C classifieds revenue, however, is not in scope and mobile only use cases for professional advertisers are rare and usually limited to highlighting existing classifieds in mobile apps.

It is difficult to differ between product listings with the characteristic of classifieds and product listings within the search of e-Commerce platforms.

Non success-based product listings can be considered as classifieds. These product listings can be found much more often in **China**.

This, along with the development of the e-Commerce market in **China** is the **basis for our very high growth assumptions**.
